

2nd March 2022

Dear Customers,

We are sure you are already well aware that as from **1st April 2022** the Government will begin implementing the Plastic Tax charge across the UK.

As it has been widely documented and publicised to date, this tax is applicable to **any plastic packaging with less than 30% PCR content** & will be charged at a rate of **£200.00 per tonne on the gross weight of the product**.

As manufacturers and importers of such products, we will be paying the tax in line with HMRC's rules & guidelines. Therefore, as from this date we will need to charge this amount as a separate line on your invoices on any applicable product.

The tax is completely out of our control, but we do have a range of sustainable products that we have developed containing 30% PCR content & therefore would be Plastic Tax exempt. In addition, we are also offering alternative products to counteract the cost of the tax through the means of using thinner films with higher technical capabilities.

Your Account Manager will be able to help you with the comparisons so that you can decide which option is best for your business, and over the coming weeks you will be contacted to discuss these.

Please note that any product bought before the 1st April will not be subject to this tax.

On the 1st April, we will not be able to despatch any goods due to the implementation of the recharging of the tax on our computer system – please can you bear this in mind when placing your orders.

If you have any queries, please let your Account Manager know & they will be happy to help.

Yours sincerely,

Karen Sherman
General Manager
Manupackaging UK
